

ALL THINGS CROWN

Dr. Kaneta R. Lott has helped to shape the smiles of hundreds of children. A board certified pediatric dentist, she earned her Doctor of Dental Surgery from Emory University. Dr. Lott is a Fellow in the American College of Dentists and the International College of Dentists. She has served as an Assistant Clinical Professor at The Medical College of Georgia, Department of Pediatric Dentistry. Her private practice of pediatric and orthodontic dentistry opened in 1984 in Atlanta, Georgia where she continues to provide excellent care for her patients. Dr. Lott speaks on Pediatric Dental Health and Dental Traumatology to national and international audiences.

Part I — STAINLESS STEEL CROWNS: 10 MINUTES FROM START TO FINISH

This portion of the course will help general dentists and assistants become more confident in the use of stainless steel crowns. Stainless steel crowns have been used successfully for many years. Research confirms that stainless steel crowns last longer than multi-surface restorative materials. Based on the fact that children have a limited attention span in the dental environment, the dentists and their staff must work quickly.

Dental professionals will receive an in-depth seminar designed to:

Determine how to diagnose and develop a treatment plan for posterior teeth.

Teach participants how to prepare, size and place a stainless steel crown in a short amount of time where the following exists:

- Extensive decay
- Moderate decay on multiple surfaces
- Enamel anomalies
- Fracture due to trauma
- Pulpotomized teeth
- Abutments for space maintainers

Part II — COSMETIC RESTORATION FOR PRIMARY ANTERIOR TEETH

Children present to dental offices with early childhood caries (ECC). Often the anterior teeth are the first to be affected. The dentist is faced with restoring the structures with metal restorative materials or extraction. This course is presented to offer alternatives that are evidence-based and cosmetic. Participants will be able to offer their patients an array of cosmetic restorative options as soon as they return to their office.

Participants will:

- Review treatment options for primary anterior and posterior teeth.
- Discuss treatment planning and case selection for proper procedure choice.
- Provide step-by-step procedure for a full cosmetic restorative coverage on primary anterior and posterior teeth.
